About Global iPay

Global Internet Payment is a synonym for easy and fast global payments. We are developing a way to make it possible for everyone to make payments to anyone in the world using a dedicated website or mobile app. The system will be launched in the form of a cryptocurrency based on the Ethereum blockchain. The Cryptocurrency, which will be formally called GIP (Global Internet Payment), will become the base for all payments made through the platform. The initial buyers of the GIP will get free access to our global payment platform/app in addition to various other benefits such as huge return on investments, a global digital wallet and more.

The GIP token will be released globally later this year. An ICO sale (in multiple phases) will be held to give potential buyers and investors an opportunity to invest in a futuristic crypto coin. All our investors and buyers are protected by the user agreement which you can find on our website.

Global iPAY is a part of Global Crypto Vision Dubai, UAE.

What is a Cryptocurrency

Cryptocurrency refers to a decentralized digital currency, usually integrated with a payment system, that allows users to perform peer-to-peer transfers of digital cash without a central authority. The currency is created from code and is completely virtual, however, its applications are real and many. Bitcoin is globally known as the first widely successful cryptocurrency that is now also being used in many real-world applications and by some major companies.

However, the actual applications of bitcoin are somewhat limited, mainly because of the privacy issue. Bitcoin provides almost no privacy to its users and the transactions are accessible to everyone on the network. Also, bitcoin transactions are not quite affordable for everyone and lack the facility of timely confirmation. We aim to solve these issues by providing a compressive digital payment and money transfer solution that will offer an easy and affordable way to send payments while ensuring that the privacy of both sender and receiver is fully protected.

Blockchain Technology

Almost all major cryptocurrencies out there are based on the blockchain concept. A blockchain is a public digital network of nodes that is used to perform and verify digital transactions performed by its users. The main benefit of blockchain is that it is decentralized so that no single person or node can alter the record without affecting the entire network. The transactions performed on a blockchain are referred to as blocks.

Every transaction performed in the blockchain is stored in a dedicated file called ledger. Blockchain technology is highly secure and free of human errors. Our crypto coin, GIP, is powered by ETH blockchain, which is one of the strongest blockchain networks out there.

What we do?

We offer a public, decentralized and secure way to perform self-executing transactions, along with **globally accessible smart contracts**.

There will be **decentralized apps** including a digital wallet that you can use to manage and buy/sell GIP tokens and other cryptocurrencies and to perform digital transactions. It will be maintained and safeguarded on a network consisting of thousands of connected but distributed devices.

Digital Tokens, called **GIP tokens**, will be created and launched as a virtual currency that can be used for performing fund transfers, payment for purchases and other monetary transactions.

Bitcoin and Global iPay

Bitcoin is arguably the most popular cryptocurrency out there. It is also one of the first successful digital coins in the market. Although the token and the concept are nearly perfect, there are some areas where Bitcoin lacks in functionality. For instance, bitcoin network is not very secure in terms of user privacy. Also, the network transactions are costly and lack real-time confirmation facility.

Global iPay (GIP Token) is nearly same in concept as the bitcoin, but it also deals with issues like privacy and fast transactions that bitcoin doesn't. The GIP network will employ multiple security mechanisms to ensure a high level protection of data and privacy. Also, it will provide real-time confirmation of transactions. All the transactions will be performed instantly and the confirmation message will be sent to the involved parties.

Purpose of Global iPay ICO

The major objective of GIP is to establish a seamless method of making global payments. As of now, there is not a standard system or application that allows users to accept or send money from/to people internationally. Bitcoin is one such method since it is a globally accepted currency, however, the use of bitcoin is limited by applications and territories with many countries still identifying it as a general method of payment.

We aim to remove this barrier by introducing a global cryptocurrency that would be accepted everywhere and used for making quick transfers of money.

The most important benefit of the GIP system is that it reduces the need for using and paying to an intermediary while making an international or even local money transfer. This effectively reduces the cost of the transaction. GIP implements a peer-to-peer network through which you can transfer funds directly to the receiver without having to pay a mediator.

Why Invest in GIP ICO

Integration the features of bitcoin and based on the powerful Ethereum blockchain, GIP has the potential to become the global payment system of the future. It has everything we may ever need to ensure safe and instant transfer of funds from one place to another, without any boundaries of network or country. The possible uses include the transfer of money, online payments of goods and services, online shopping, online recharge and bill payments and more.

Some of our coin features include

Total Token

The GIP ICO sale will be held on a first-come-first-serve basis. There are only a limited number of coins, of which a certain percentage will be put on sale. The initial investors and buyers will also get a bonus of up to 10%. Here are the GIP ICO statistics:

Total Token/Coin: 2.1b

- Pre ICO sale: 15% (price \$ 0.0300)
- ICO sale: 18% (\$ 0.0500)
- Bonus program: 10%
- Established and promotion: 7%
- Public market: 35% (starting \$ 0.1000)
- For company: 10%
- Social works 5%

- **Minimum Purchase of GIP Token \$100.00**
- **Get referral bonus of 10% on token purchases made in pre-ICO and ICO till December 31**

About GIP Token

GIP is a decentralized cryptocurrency based on ERC20 Ethereum blockchain. It will be traded on a global platform and will be accessible to users globally. The GIP token will back our global payment system allowing our users to make quick and easy payments to anyone and anywhere in the world.

The GIP token is being developed on the latest financial technologies and is based on one of the most secure blockchain networks. The idea is to enable a pure decentralized peer-to-peer digital payment system. Check out the token price statistics below.

GIP token price for Pre-ICO sale	\$ 0.0300 per token
GIP price for ICO	\$ 0.0500 per token
Bonus	10% on token
Minimum investment (Minimum Purchase of GIP Token)	\$ 100

Global iPay Target User Base

The target user base of GIP is as broad as it gets. The token along with its digital payment system will be launched on a global platform and will be accessible to users and merchants all over the world. Our token will target every person who makes use of digital currency/wallet for making/accepting payments. Here are some of our potential target users.

Common people

To make national/
international money
transfers

Businesses

As a way to enforce
stronger and better
contracts (smart contract)

Online/offline merchants

To accept secure
payments from
customers, globally

Consumers

To make payment for
services and
goods

GIP Features & Benefits

Smart FinTech

By now, you must have realised that Global iPay is a smart combination of technology and financial services. It involves the use of the most secure networking technology available till date (blockchain) to enable cost-effective, secure and reliable financial services.

FinTech represents the technical evolution in the ways financial transactions are performed today. We make use of the Smart Finance Technology to ensure seamless and error-free finance activities. Digital is now the preferred method for performing finance and banking transactions, which is faster and more reliable than the traditional methods.

Instant Payment/Fund Transfer

The platform has been designed to ensure fast and reliable payments. The money is transferred instantly after authorizing the payment, irrespective of the location or distance. The sender also receives a confirmation message of delivery.

The payment transfer system is available globally. That means you can transfer money to anyone, anywhere in the world and at any time. Moreover, the GIP tokens could be used for purchasing things online and offline and for other monetary and non-monetary transactions.

Usable

The application is usable in a wide range of areas and for every purpose that involves sending/receiving money or making a transfer of funds. It can be used by companies, enterprises, consumers, shopkeepers, online merchants and more.

The uses of GIP token and digital wallet are not limited to making payments. The users can also participate in the trading of crypto-tokens at all the leading exchanges using their wallet accounts. The token can be exchanged for any other cryptocurrency and for some physical currencies as well.

Flexible

This is one of the features that make our system stand out from the competition. The flexibility of Global iPay can be summed up in the following four points.

- ◆ Any amount (and any number of transactions)
- ◆ Anytime
- ◆ Anywhere
- ◆ To anyone

To sum up, you can send money or make payments of any amount at any time to anyone in the world. Our token knows no boundaries. The system is as flexible as you can imagine. Send money local or global without worries of confirmation, delivery or the transaction cost.

Scalable

Each and every transaction performed through our system is recorded in a separate ledger on the blockchain. You can check the transaction history, records, time, transaction status, etc. at any time in your account dashboard.

Usually, the transactions are performed almost instantly and you will receive a confirmation message altogether. But if you don't, you can always check in your transaction history for the status of your recent transaction. We have kept the system fully scalable so you don't have to miss a single penny or much of your valuable time.

Safe and Secure

One of the things that Ethereum blockchain is known for is the security of its network. The GIP token derives security feature of the blockchain to enable safe and highly-secure transactions. Any failed transaction is automatically refunded back to the sender.

We take the security thing very seriously. This is why our system has been integrated with high-class security features including multiple security-checks, password protection, encryption for every transaction performed on our blockchain, dedicated user key, confirmation messages, security alerts and more.

Trustworthy

We have taken multiple measures to ensure a high level of trust among the users of the GIP token. The system is backed by a reputed company with clients and investors all over the world. It provides security against failed transactions, system failure and any other issue that may arise.

Everything you may need to know about the ICO, the GIP token and our future plans have been detailed in this whitepaper. We understand that the trust and satisfaction of our users are very crucial to the success of this platform. We, therefore, have enabled a completely open system where the users can interact with us any time through multiple means, ask questions, share suggestions and ideas or anything else to gain a trust in the system.

We request the privacy of our users. The transactions of a particular user will be safe and private only to them, except for certain security conditions where we may need to verify all the transactions in order to find the error.

Applications - Banking and Digital Payments

The service can be used by any consumer or merchant for performing banking and other financial transactions, including the transfer of money, payment for services, sending money to bank accounts, account to account transfer, payment of bills, etc.

The digitization of banking and other financial transactions is a major goal behind the launch of the Global iPay. We want to establish a global payment system that could be used by everyone in the world for performing any kind of financial transactions. Whether you are a business providing services to remote clients or a merchant making supplies to local vendors, you can use the GIP system for making/accepting payments.

Futuristic Payment System

One of the best things about Global iPay is that it is based on a futuristic concept - digital payments - which will never get old or outdated. This benefits greatly to the investors and buyers of the GIP tokens as the returns are expected to be pretty huge.

Another major benefit is for the users of the GIP. Since we have designed a payment system based on the futuristic technologies, the users will be able to keep using it for a very long time in the future. The system will be regularly updated with the latest technologies to maintain the user interest and usability.

How do cryptocurrencies work?

Cryptocurrency is a medium of transactions or exchange. It is created and maintained completely on the blockchain, using specific encryption techniques to provide security and verify the transactions.

Cryptocurrency is basically a code representing a virtual currency created and launched by a person or a company. It has no physical existence. Its basic purpose is to replace the physical methods of payment. Cryptocurrencies are implemented on the blockchain which provides a secure and reliable network for transactions. Here's how a cryptocurrency transaction works.

Request Creation :- The sender or receiver initiates a transaction

Request Transfer :- The transaction request is sent to the P2P blockchain network consisting of multiple nodes (computers)

Validation :- Each node in the networks makes use of predefined algorithms to validate the transaction and the status of the user/requester. It may involve the transaction of cryptocurrency, contracts, information and/or records.

Request Transfer :- The transaction request is sent to the P2P blockchain network consisting of multiple nodes (computers)

Ledger Creation :- Upon verification, the transaction is converted into a block of data and added to the ledger.

Block addition :- The new transaction block is added to the blockchain as a permanent part of it.

Transfer completion :- The transaction is completed as the transfer is made.

The entire transaction is performed in the matter of a few seconds. The validation step ensures a high level of security in each transaction performed through the GIP system.

Partnership

Potential partners and investors are invited to join the league by investing in a futuristic cryptocurrency - GIP. Our potential partners include financial institutions, banks, merchants, retail chain shop owners and all other investors globally who may be interested in using a secure API ecosystem enabled with Smart FinTech for the growth of their own businesses.

The Global iPay partnership program is very easy to join. You can contact us for more details or just read the whitepaper as all the information is available there. Once you are ready, you can start by participating in the pre-ICO sale which will be held in May 2018. A special discount will be offered to our partners who buy tokens in the pre-ICO sale.

Global iPay Vision

GLOBALiPAY aims to be the benchmark for the digital transaction of assets and values on the Ethereum blockchain Network. Drawing prowess from the robust and secure ERC20 standard Ethereum token, the GIP token will provide a comprehensive global digital payment solution free of intermediaries and regulations. GLOBALiPAY vision is to empower 21st Century Global Citizens a free and frictionless digital network for transactions that would set the precedent for others to follow.

RoadMap

2021 Achievement Target

Global Crypto Bank and Global Crypto Tower within 2021 in world famous financial zone Dubai.
